Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity 100.0%;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Anti-interpidermal cellular antibody-combining peptide - which can be immobilised on column to form adsorbent useful for treating diseases related to the antibody Claim 1; page 2; 7pp; Japanese.

A new peptide is disclosed which contains at least 5 contiguous amino acids from the sequence Val Gly Ile Asp Gln Pro Pro Phe Gly Ile Phe Val Val Asp Lys Asn Thr Gly Asp Ile Asn Ile Thr Ala Ile Val Asp Arg Glu Val Val Asp Lys Asn Thr Gly Asp Ile Asn Ile Thr Ala Ile Val Asp Arg Glu Glu (the present sequence), the peptide not containing more than 50 residues. The peptide combines with anti-interepidermal cellular antibody. It can be immobilised on a carrier to prepare an absorbent useful for the treatment of diseases related to anti-interepidermal
                                                            Fused protein recognised by pemphigus vulgaris auto:antibody useful to treat and diagnose pemphis vulgaris Claim 1; Page 7-9; 9pp; Japanese.
W07908 represents the human pemphigus vulgaris (PV) antigen extracellular region. The PV antigen is produced in patients wipemphis vulgaris resulting in autoimmune disease. PV is a rare relapsing disease causing suprabasal, intra-epidermal bullae (vesicles) of the skin and mucuous membranes, which is fattal if untreated. The PV antigen was fused to a human IgGl hinge region and the resulting fusion protein is useful to treat or diagnose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-JUL-1996.

New peptides are disclosed which contain at least 5 contiguous amino acids from the sequence val Gly Ile Asp Gln Pro Pro Phe Gly Ile Phe val Val Asp Ile Asp Ile Asn Ile Thr Ala Ile Val Asp Arg Glu Glu (see R93960), the peptide not containing more than 50 residues. The peptide combines with anti-interepidermal cellular antibody. It can be immobilised on a carrier to prepare an absorbent useful for the treatment of diseases related to anti-interepidermal cellular antibody. The present sequence is a specific example of the new peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US7798918-A.

Peptide combining with anti-interepidermal cellular antibody.
anti-interepidermal cellular antibody; autoantibody; adsorbent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence is the pemphigus vulgaris 130kD antigen. The protein and its encoding DNA may be used in the diagnosis and treatment of pemphigus vulgaris. It is thought that the antigen may be a cell adhesion molecule.

Example 2; Page 5; 7pp; Japanese.

New peptides are disclosed which contain at least 5 contiguous amino acids from the sequence Val Gly Ile Asp Gln Pro Pro Phe Gly Ile Phe Val Val Asp Lys Asn Thr Gly Asp Ile Asn Ile Thr Ala Ile Val Asp Arg Glu Glu (see R93960), the peptide not containing more than 50 residues. The peptide combines with anti-interepidermal cellular antibody. It can be immobilised on a carrier to prepare an absorbent useful for the treatment of diseases related to anti-interepidermal cellular antibody. The present sequence is a specific example of the new peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  J09077800-A.

pemphigus foliaceus antigen-IgG constant region fusion protein - lin through the hinge region used to treat pemphigus foliaceus Claim 1; Page 10-12; 17pp; Japanese.

This sequence represents a fused protein recognised by pemphigus foliaceus patient autoantibody which comprises the constant region of IgG linked to the extracellular region of pemphigus foliaceus antigen protein through the hinge portion. Pemphigus foliaceus is a chronic, generalised, vesicular and scaling skin eruption similar to dermatitis herpetiformis. The pemphigus foliaceus antigen fusion protein is useful to treat pemphigus foliaceus. The antigen is especially administered through an adsorbent upon which the fusion protein is immobilised via a carrier. The fusion protein is also useful for detecting pemphigus foliaceus antibodies which is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-MAY-1994; 129556.

The Antibody reactive with part of desmosomal cadherin - exposed on purifice of epithelial or carcinoma cells, not bound to desmosomes, present for diagnosis and treatment of carcinoma micrometastases PS Claim 7; Page 5; Bpp; German.

CC The present sequence is a segment of the desmosomal cadherin (DC), CC desmoglein Dsg2, which is exposed on the surface of epithelial or carcinoma cells and not bound to desmosomes. An antibody (Ab) CC diagnose, i.e. to detect carcinoma cells, especially CC micrometastases, not bound to desmosomes, to separate, enrich or detect living or fixed carcinoma cells by cell sorting methods and CC as a therapeutic to deliver agents, e.g. other Ab or toxins, to CC metastatic carcinoma, and detects parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the parts of DC that are not compared to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TRESULT.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C CDNA libraries were constructed from the mouse osteoblastic cell
C line MG373-El and from mouse liver tissue, amplified by PCR, and
C then as much common DNA as possible removed by hybridisation between
C the 2 libraries. Residual El-specific DNA was amplified, inserted
C into lambda gt10 and screened by plaque hybridisation. A minibank of
C 273 E-specific clones was recovered, their inserts amplified and
C used to screen total RNA from both cell types. One clone specific
C for El was identified and sequenced. The insert from this clone was
C used to screen total RNA from El RNA and the longest posn, insert
C cloned in pGEM 112f (+) to give pKOT164. This insert was sequenced;
it encoded the 796 AA mouse precursor protein (Q44391/R49730). The
C insert was also used to screen a cDNA bank prepd. from human
osteosarcoma to identify 2 clones encoding the 2 human precursor
proteins - OSF-4-1 and OSF-4-2 (Q44392/R49731 and Q44393/R49732
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

The likelihood of establishing and maintaining a pregnancy, blastocyst implantation or endometrial receptivity are determined by measuring the level of cadherin-11 mRNA or protein in endometrial cells. A level below a standard value indicates inability to establish or maintain pregnancy. Women who are identified as having low level expression of cadherin-11 in endometrial cells can then be treated with a genetic construct comprising the cadherin-11 cDNA. The expression of cadherin-1 from the construct increases fertility and lessens the

Residual El-specific DNA was amplified, inserted into lambda 9t10 and screened by plaque hybridisation. A minibank of 273 E-specific clones was recovered, their inserts amplified and used to screen total RNA from both cell types. One clone specific come total RNA from both cell types. One clone specific clone was deto screen cDNA prepd. from El RNA and the longest posn. insert cloned in pGEM 112f (+) to give pKOT164. This insert was sequenced; it encoded the 796 AA mouse procursor protein (Q44391/R4973). The insert was also used to screen a cDNA bank prepd. from human proteins - OSF-4-1 and OSF-4-2 (Q44392/R49731 and Q44393/R49732

The human cadherin cDNA used from a foetal brain cDNA library, using probes based on homologous rat cadherin cDNA.

Antibodies or fragments that specifically bind the human cadherin can be used to purify the cadherin, determine its tissue expressic and antagonise its ligand/antiligand binding activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Full length human cadherin-11.
Ca2+ dependent; cell adhesion protein; foetal; cadherin; brain; human; antibody; purification; determination;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              for El was identified and sequenced. The insert from this clone was used to screen cDNA prepd. from El RNA and the longest posn. insert cloned in pGEM 112f (+) to give pKOT164. This insert was sequenced; it encoded the 796 AA mouse precursor protein (p44391/R49730). The insert was also used to screen a cDNA bank prepd. from human osteosarcoma to identify 2 clones encoding the 2 human precursor proteins - OSF-4-1 and OSF-4-2 (q44392/R49731 and q44393/R49732
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     respectively).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        皮
                                                                                 Polynucleotide(s) encoding human protocadherins pc3 and pc4 and rat pc5 - involved in cell-cell adhesion and regulation activities claim 16; Page 122-125; 146pp; English.

Claim 16; Page 122-125; 146pp; English.

C R86865-R86867 represent the sequences for three protocadherins. This sequence represents the human protocadherin pc4. These sequences are related to cadherin, and possess cell adhesive ability. Cadherins are glycosylated integral membrane proteins that are involved in cell-cell adhesion. Cadherins are composed of an N-terminal extracellular domain which consists of 5 unique subdomains, a membrane spanning domain, and a c-terminal cytoplasmic domain. The cytoplasmic domain interacts with the cytoplasmic domain is not present in all cadherins, but in those which possess it, it is essential for the cadherins, but in those which possess it, it is essential for the cadherins adhesive function. The cadherins which do not possess a cytoplasmic domain appear to function via a different method from those with a cytoplasmic domain.

These sequences were isolated using primers 1 and 2 (see 703575 and the cell-cell adhesive properties. Antibodies produced against these composes are properties. Antibodies produced against these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

Cadherins are calcium-dependent cell adhesion proteins. They are glycosylated integral membrane proteins that have an N-terminal extracellular domain that determines binding specificity, a hydrophobic membrane spanning region and a C-terminal cytoplasmic domain, which is highly conserved among members of the superfamily. The C-terminal domain interacts with the cytoskeleton through eatenins and other cytoskeleton-associated proteins. The novel cadherin proteins may be used in the analysis of the role of cadherins in various cancers. Sequence analysis of the cadherin proteins also allows investigation of the structure and function of cadherin. The cadherin proteins may be isolated by using anti-cadherin antibodies. These antibodies may also be used to modulate the activity of cadherins. Each subclass of cadherins has a unique tissue distribution
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents human cadherin-1 provides details of human cadherin-5, -8,

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Jun 11 17:18:54 1999; MasPar time 4.32 Seconds 139.098 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Sequence: >US-08-991-628-2 (1-15) from US08991628.pep 105 1 FGIFVVDKNTGDINI 15

Scoring table: PAM 150 Gap 15

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

pir60 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 26.793; Variance 39.116; scale 0.685

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Jun 11 17:16:04 1999; MasPar time 2.46 Seconds 172.535 Million cell updates/sec

Tabular output not generated.

Sequence: 1 FGIFVVDKNTGDINI 15

Scoring table: PAM 150 Gap 15

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37

swiss-prot37 1:swissprot

Statistics: Mean 27.494; Variance 34.835; scale 0.789

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CELL SCI. 96:239-248 (1990).

FUNCTION: COMPONENT OF INTERCELLULAR DESMOSOME JUNCTIONS. INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDIATE FILAMENTS MEDIATING CELL-CELL ADHESION. MAY CONTRIBUTE TO EPIDERMAL CELL POSTTIONLING (STRATIFICATION) BY MEDIATING DIFFERENTIAL ADHESIVENESS BETWEEN CELLS THAT EXPRESS DIFFERENT ISOFORMS. LINKED TO THE KERATINIZATION OF EPITHELIAL TISSUES.

TO THE KERATINIZATION OF EPITHELIAL TISSUES.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

TISSUE SPECIFICITY: EPIDERMIS AND WEAKLY IN TONGUE PAPILLAE.

DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS
                                                                                                            PTM: FORM 1A IS PHOSPHORYLATED ON A SERINE BUT FORM 1B IS NO ALTERNATIVE PRODUCTS: TWO FORMS; 1A OR DG2 (SHOWN HERE) AND DG3; ARE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE. BIOPHYS. ACTA 1264:178-182(1995).

-I FUNCTION: CONTROL OF TOPOLOGICAL STATES OF DNA BY TRANS
BREAKAGE AND SUBSEQUENT REJOINING OF DNA STRANDS. TOPOI
MAKES DOUBLE-STRAND BREAKS.

-I CATALYTIC ACTIVITY: ATP-DEPENDENT BREAKAGE, PASSAGE AND
OF DOUBLE-STRANDED DNA.

-I SUBUNIT: HOWODIMER (BY SIMILARITY).

-I SUBCELLULAR LOCATION: NUCLEAR; NUCLEOLUS.

-I SUBCELLULAR LOCATION: NUCLEAR; NUCLEOLUS.

-I EUKARYOTIC TOPOISOMERASE I AND II CAN RELAX BOTH NEGATI
POSITIVE SUPERCOILS, WHEREAS PROKARYOTIC ENZYMES RELAX
NEGATIVE SUPERCOILS.

-I SIMILARITY: BELONGS TO TYPE II TOPOISOMERASE FAMILY.
